Version 1.0

Research Insights: What Makes Browser Games Go Viral

The .io Formula (Agar.io → 100M+ players, ZombsRoyale.io → 120M+ players):
One-click start → One core mechanic → Real-time leaderboard → Permadeath + instant restart → Emergent social dynamics

Compulsion Loop

Anticipation → Action → Reward → Repeat. Short cycle times trigger dopamine. Players who die should be back in-game within 1 second.

Easy to Learn, Hard to Master

Agar.io is "move mouse, eat dots" — but mastery requires deep strategy. Skill ceiling keeps players engaged long after they learn basics.

Viral by Design

Slither.io unlocked cosmetic skins by sharing the game link. Zero marketing budget, every player became a marketer.

Juice = Feel

Screen shake, particles, squash-and-stretch, sound effects. High visual value for low performance cost. Polish amplifies strong mechanics.

Phase 1: Core Game Feel ("Juice")

Make every second of gameplay feel satisfying

#	FEATURE	IMPACT	EFFORT
1.1	**Screen shake** on near-miss (50–150ms, subtle easing)	High	Low
1.2	**Particle effects** — explosion on death, trail while dashing, sparks on near-miss	High	Medium
1.3	**Enemy cull animation** — pop/fade when enemies are removed from play	Medium	Low
1.4	**Player squash-and-stretch** on direction change and dash	Medium	Low
1.5	**Progressive background tension** — color/grid shifts as time increases (calm → red tint)	High	Low
1.6	**Sound effects** — whoosh on dash, heartbeat at >15s, ding on near-miss	High	Medium
1.7	**Camera zoom** — slight zoom-in as difficulty ramps up	Medium	Low
1.8	**Canvas 2D renderer** — replace DOM-based enemies with canvas (supports 200+ entities at 60fps)	Critical	High

Phase 2: Addictive Loop & Progression

"Just one more round" — the psychology of retention

#	FEATURE	IMPACT	EFFORT
2.1	**Instant restart** — skip game-over panel with single tap/key, show stats as brief overlay	Critical	Low
2.2	**Personal best ghost line** — show your previous best path as a faint trail during gameplay	High	Medium
2.3	**Daily challenges** — "Survive 15s without dashing", "Dodge 100 enemies in one run"	High	Medium
2.4	**Achievement / badge system** — unlock titles: "Speed Demon", "Untouchable", "21s Club"	High	Medium
2.5	**XP & level system** — cumulative XP across all runs, visible rank/level beside username	High	Medium
2.6	**Unlockable player skins** — different colors, shapes, and trails earned by milestones	High	Medium
2.7	**Streak counter** — "3 games in a row above 10s" with bonus XP rewards	Medium	Low
2.8	**Weekly leaderboard reset** — keeps competition fresh; archive all-time board separately	Medium	Low

Phase 3: Social & Viral Features

Turn every player into a marketer

#	FEATURE	IMPACT	EFFORT
3.1	**One-click share** — "I survived 18.5s! Can you beat me?" with auto-generated link + image card	Critical	Medium
3.2	**Dynamic OG meta image** — server-generated share card showing score, rank, and path trace	High	Medium
3.3	**Challenge a friend** — generate a URL with your score embedded; friend tries to beat it	High	Medium
3.4	**Spectator / replay mode** — watch the top leaderboard runs as replays	Medium	High
3.5	**Unlock skins by sharing** — Slither.io's proven viral trick; share link → free skin	High	Low
3.6	**Clan / team system** — create a team, combined leaderboard for team averages	Medium	High
3.7	**"Currently playing" counter** — show live player count on lobby for social proof	Medium	Low

Phase 4: Visual & Audio Polish

Stand out from every other mini game

#	FEATURE	IMPACT	EFFORT
4.1	**Theme system** — Dark, Neon, Retro, Matrix themes (unlockable via achievements)	High	Medium
4.2	**Dynamic music layers** — add instruments as time progresses (0–5s calm, 10s+ drums, 15s+ intense)	High	Medium
4.3	**Enemy variety** — pulsing, spinning, splitting, homing enemy types with distinct visuals	High	Medium
4.4	**Power-ups** — shield (1-hit protection), slow-mo (2s), magnet (repels nearby enemies)	High	High
4.5	**Arena hazards** — shrinking safe zone, laser walls, gravity wells appearing after 15s	High	Medium
4.6	**Death replay** — 3-second slow-motion replay of the exact moment you died	High	Medium
4.7	**Combo system** — near-misses within 1s of each other build a combo multiplier for XP	Medium	Low

Phase 5: Technical Performance

Buttery smooth on every device

#	FEATURE	IMPACT	EFFORT
5.1	**Canvas 2D renderer** — draw all game entities on canvas instead of DOM manipulation	Critical	High
5.2	**Object pooling** — pre-allocate enemy objects; reuse instead of create/destroy (eliminates GC pauses)	High	Medium
5.3	**requestAnimationFrame** — replace setInterval with rAF for V-sync aligned rendering	High	Medium
5.4	**Delta-time movement** — frame-rate independent physics so speed is consistent across devices	High	Medium
5.5	**Spatial partitioning** — grid-based collision detection instead of O(n) enemy iteration	Medium	Medium
5.6	**PWA support** — service worker, manifest.json; installable on mobile, works offline	Medium	Medium
5.7	**Touch gesture improvements** — swipe-to-dash, haptic feedback on supported devices	Medium	Low

Phase 6: Multiplayer (Long-term)

The ultimate engagement driver

#	FEATURE	IMPACT	EFFORT
6.1	**Real-time multiplayer arena** — 10–20 players dodge the same enemies simultaneously	Game-changing	Very High
6.2	**Last one standing mode** — players see each other; last survivor wins the round	Game-changing	Very High
6.3	**WebSocket server** — real-time state synchronization with client-side prediction	Critical for MP	High
6.4	**Spectate after death** — eliminated players watch remaining survivors	High	Medium

Phase 7: Monetization (Non-intrusive)

Sustainable revenue without ruining gameplay

#	FEATURE	IMPACT	EFFORT
7.1	**Cosmetic shop** — skins, trails, death effects at $0.99–$2.99 price points	Revenue	Medium
7.2	**Rewarded video ads** — watch ad to unlock a premium skin for 24 hours	Revenue	Low
7.3	**Interstitial ads** — between rounds only, never during gameplay; A/B test placement	Revenue	Low
7.4	**Season pass** — monthly themed challenges + exclusive skins + bonus XP	Revenue	Medium

Recommended Execution Timeline

Sprint 1 (Week 1–2): 1.8, 5.1, 5.3, 5.4 — Canvas renderer + proper game loop foundation

Sprint 2 (Week 3): 1.1–1.6 — Game feel / juice (screen shake, particles, SFX)

Sprint 3 (Week 4): 2.1, 2.2, 2.7 — Addictive loop (instant restart, ghost line, streaks)

Sprint 4 (Week 5–6): 3.1–3.3, 3.5, 3.7 — Viral/social features (share, challenge, skins)

Sprint 5 (Week 7–8): 2.3–2.6, 4.1–4.3 — Progression system + visual polish

Sprint 6 (Week 9–10): 4.4–4.7, 5.5–5.7 — Advanced gameplay + performance tuning

Sprint 7+ (Month 3+): 6.x, 7.x — Multiplayer + monetization

Priority #1: Migrate to Canvas 2D rendering (1.8 / 5.1). The current DOM-based approach creates/destroys up to 200 div elements — this will bottleneck everything else. After that, add juice (screen shake, particles, sound effects). These two changes alone will transform how the game feels.

Priority #2: Instant restart (2.1) + one-click share (3.1). These are the two highest-ROI features for retention and virality. Every extra second between death and the next round loses players. Every share is free marketing.
